2. Citations and explanations (Rule 70.7)

The inventions that are set forth in claims 29 to 32 involve an inventive step in relation to the documents that are cited in the international search report.

Documents 1 to 3 do not disclose or suggest a "transfer control table for storing transfer schedules that express the relationships between the substrate transfer timing and the aforementioned modules which said substrates are being transferred to or from, said transfer control table being configured from two-dimensional tables that comprise a time axis, which establishes the transfer timing for implementing operations to transport the aforementioned substrates at prescribed intervals, and a transfer flow axis, which arranges the aforementioned modules that the aforementioned substrates are being transferred to or from." Meanwhile, as a result of the feature in question, the present inventions exhibit a prominent effect whereby it is possible to determine conditions for increasing the processing throughput by means of extremely simple graphic operations that are carried out on a display.
